Website Accessibility Issues

This section shows accessibility issues, indicating problems for older users, people with disabilities or accessibility needs. Automated testing cannot detect all accessibility issues, so should be used alongside human/manual testing.

Level A

Pages with level A issues are unusable for some people

7 issues on 24 pages

Perceivable

Failure of Success Criterion 1.1.1: Non-text Content

Number of occurrences: 1

Priority to fix: High

- **alt** text should not be a meaningless image file name.

Change the **alt** text to describe the information or function represented by the image, and for purely decorative images use **alt=""** without any global ARIA attributes. Do not use **alt** text containing only spaces since that's voiced as an unlabeled image.

Failure of Success Criterion 1.3.1: Info and Relationships

Number of occurrences: 3

Priority to fix: High

- Element `li` not allowed as child element in this context.
The `li` element must appear inside a `ol` or `ul` element. Without the parent list element it looks like a bullet list, but is not voiced as a list by a screen reader.

Failure of Success Criterion 2.4.2: Page Titled

Number of occurrences: 15

Priority to fix: High

- Document must have a title.

For HTML pages add a title element inside the head element. For Office documents and PDF documents produced from Office, fill in the Title in Document Properties before saving as PDF.

- Some pages have the same title , so the title cannot be used to distinguish pages.

Change the title elements so they are unique for each page.

Robust

Failure of Success Criterion 4.1.2: Name, Role, Value

Number of occurrences: 2

Priority to fix: High

- The element `button` must not appear as a descendant of the `a` element.

The name, role, and state of an interactive control is ignored when the control is nested inside another interactive control, meaning the control is voiced incorrectly in a screen reader.

Other Accessibility issues

Failure of ARIA

Number of occurrences: 5

Priority to fix: High

- Headings should not be empty.

Add visible text to the heading, or alt text if the heading contains an image. Screen readers read out page headings, allowing users to quickly skip to a section, but some older screen readers do not ignore empty headings.

- 🔴 If you set any of the colors on the `body` or `a` elements you must set all of them.

In HTML the color attributes are `text`, `bgcolor`, `link`, `alink` and `vlink`. In CSS the attributes are `color` and `background-color`. Some users have browser defaults set to white text on a black background, so setting one color without setting the others can result in white text on a white background.

Level AAA/Informative

Pages with level AAA or Informative issues can be difficult to use

These messages are for information only and do not indicate errors

Level AAA

- 🟡 Avoid specifying a new window as the target of a link with `target=_blank` .

Displaying new windows without warning can be very confusing to non-sighted and mobile users. Some screen readers and mobile devices give very little indication a new tab or window has opened. If you cannot avoid displaying a new window, insert an "opens in a new window" warning into the link text or add the warning to the link using a `title` attribute or `aria-describedby` attribute.

- 🔔 Each section of content should begin with a heading element (h1 , h2 , h3), but this page has no headings.

In HTML place headings before each section of content, making sure the main heading is h1 , sub-headings are h2 and so on. For PDFs produced from Word, use the Heading 1, Heading 2 and Heading 3 styles.
